Zi En Tham (Zen)

+61450190503 | thamzien@gmail.com | Github | Tableau Profile

Education

Bachelor of Computing Science (Honours) **August 2021 - August 2024**
University of Technology Sydney (UTS)

- Major: Artificial Intelligence and Data Analytics (WAM 86.58)

Skills

Programming language: SQL, Python, HTML/CSS, Java, PHP, Javascript, C++
Languages: English, Chinese (Native), Cantonese, Malay
Tools: Git, Node, React, TypeScript, Docker, Laravel, Excel, Tableau, PowerBI, AWS EC2

Work Experience

Web Developer **May 2025 – Present**
Trivesta, Sydney, NSW, Australia

- **Docker Compose containerization** with Traefik edge routing, Nginx reverse proxy, MariaDB, and Redis object caching
- **GitHub Actions CI/CD** reducing deployment effort by 50%
- **Docker image optimization** improving WordPress performance by 75% and cutting infrastructure costs by 30% through lower-tier VPS migration
- **Cloudflare security hardening** and DNS management
- **AI/ML predictive modeling** achieving 80%+ churn prediction accuracy to inform retention strategies
- **WordPress custom theme development** (PHP, MySQL) for corporate website and CRM platform

Operation Developer **September 2024 - Present**
Flash Media Solutions, Rydalmere, NSW, Australia

- **Client relationship management** as primary point of contact for inbound inquiries and call handling; oversee inventory control and delivery logistics coordination
- **Custom WordPress theme development** (PHP, MySQL) for corporate website; reduced deployment effort by 30% through Git version control implementation
- **Built a full-stack stock-management system (React, TypeScript, Node.js, Express, PostgreSQL)** tracking inventory by serial number, replacing a spreadsheet system and cutting stock-count errors with 50+ automated tests
- **Legacy system modernization** migrating Magento 1.0 to custom WordPress theme (PHP, MySQL) and transitioning Linux enterprise servers to new provider
- **Server infrastructure management** with automated backup pipelines ensuring business continuity

Technical Support Engineer Intern **January 2020 – Mar 2020**
Net Onboard Sdn Bhd, KL, Malaysia

- **Network cabling infrastructure**: created and organized structured cabling for server deployments
- **Server provisioning and deployment**: prepared and deployed bare-metal and virtual servers per client requirements
- **Linux server troubleshooting**: diagnosed and resolved server issues reported by clients across Ubuntu and CentOS environments
- **Testing environment deployment**: built isolated staging environments for pre-production validation
- **Network architecture design**: planned and implemented network topologies and infrastructure layouts
- **Technical documentation**: recorded meeting minutes and maintained documentation for technical support department
- **PowerShell scripting and automation** for system administration and deployment tasks

Projects

VT Nation Website | WordPress **June 2026**

- Replaced 20-year-old legacy Sitejet builder and OpenCart stack with custom WordPress theme built from scratch
- Built GitHub Actions CI/CD pipeline for automated testing and zero-downtime deployments to staging subdomain
- Migrated product data and content from legacy OpenCart database to WordPress custom post types and fields
- Delivered modern responsive website improving mobile usability and page load performance across all devices
- Tools: WordPress, PHP, MySQL, GitHub Actions, CI/CD, HTML, CSS, JavaScript

Stock Management System **March 2026**

- Replaced spreadsheet-based inventory tracking with a serial-numbered unit ledger where every stock count is derived from individual unit rows rather than hand-edited counters, making quantity drift arithmetically impossible
- Enforced business rules through a pure domain layer and Postgres invariants (partial unique indexes, check constraints), backed by 112 automated tests covering every guard branch and boundary condition
- Resolved owned-versus-in-stock complexity by modeling purchase intent and physical presence as separate truths with explicit guard rules, preventing silent count corruption during adjustments
- Delivered warranty document generation by programmatically filling a branded Word template after determining cPanel shared hosting blocked server-side PDF rendering engines (LibreOffice/Chromium)
- Tools: React, Vite, TypeScript, Express, PostgreSQL, Prisma, Vitest, Git, cPanel

2D Drawing to 3D Model Web Tool **December 2025**

- Built browser-based tool converting 2D canvas drawings into exportable 3D GLB models
- Implemented Three.js extrusion pipeline with direct compatibility for major game engines
- Designed for mobile and desktop with future skeletal rigging support planned (ongoing)
- Tools: Three.js, JavaScript, WebGL, GLB Export

AI Trading Summarizer **December 2025**

- Built an n8n AI pipeline that ingests trading documents (PDF, DOCX, XLSX, CSV, TXT) via a single webhook and returns structured, chunked GPT-4o-mini summaries
- Engineered an async job flow (instant acknowledgement, background processing, WordPress callback) with prompt-injection and size-guard security across document and chat branches
- Tools: n8n, OpenAI GPT-4o-mini, JavaScript, WordPress, Webhooks, REST APIs
